Arturo Enriquez

What does your job entail?
I provide support to the SANDIS program as well as test new features to ensure they roll out successfully and function as intended, while ensuring an up-to-date and accurate documentation on the features. I am currently leading a training series on Query to the San Diego offices. I also work with the rates team to support the DDS rate study implementation.

How would you describe your job to a 5-year-old?
I make sure the lights still work and the gears haven't fallen off the SANDIS bicycle. I also teach people to ride the bicycle by showing them how the gears work.

What do you enjoy most about your current role?
The opportunity to teach people on how to use SANDIS and all of its features effectively. Being able to receive feedback on what works and what doesn't work is important to me. It allows us to figure out what can be improved in SANDIS. Whenever I see the 'AHA' moment in people's eyes, it's rewarding knowing they will be able to pass on what I've taught.

What do you think makes your team unique?
Every single team member loves to help others. The culture in SANDIS is different than every other organization I've been a part of. Every member brings something different to the team, learns from each other and is firing on all cylinders. Whether it's a knack for design, for troubleshooting, or for being forward-thinking, everyone brings something unique to the picture and is committed to improving SANDIS to make it better than the day before.

**In your time with SANDIS, what has been your favorite project so far?**
Being a part of the push to update our documentation page - SANDIS Knowledge.

Three words to describe you.
Analytical, tinkerer, and geek.

**What's something most people don't know about you?**
I was gifted a 3D printer and broke it within an hour of using it. I had to re-solder some parts back together, but after two to three hours of burning my fingertips, I was able to fix it and print a pretty cool pencil holder. Tron: Legacy is also my favorite movie and the most treasured object I have is the motorcycle (Ducati Sports Classic) from the movie.

SANDIS is committed to delivering free training to empower your team and your regional center to provide quality service to the people whom we serve. You can request a tailored training designed specifically for your team.

Take advantage of free training from SANDIS, and learn the application online or in-person. Contact your SANDIS Application Analyst to learn more about *SANDIS Learn* and schedule a training.

IMPROVE YOUR *
SANDIS EXPERIENCE

Tips & Tricks to enhance your SANDIS experience.

The **Filter & Search** feature is commonly used to narrow the information being displayed in most table interfaces in SANDIS. Users can filter a report by DOB, status, user code, and more! When Filter & Search is executed, SANDIS will populate only the information that matches what is entered.

Here are the steps to Filter & Search:
1. Open a program with a table interface
2. Enter the qualifying information to search in the column(s)

Note: If the table does not support the Filter & Search feature, you may need to use the **Filter & Find** feature.

Here are the steps to Filter & Find:
1. Open a program with a table interface
2. Right-click the navy blue bar
3. Select Filter
4. Enter the qualifying information to filter the column
